

AFIX VP is a software-only product which gives your agency a cost efficient way to provide limited access to your AFIX database for viewing and printing fingerprint and palm records.

AFIX VP allows the user to select, view any EFTS-formatted fingerprint and palm print records held in a NIST-compliant database (including biographical data, photographs and print images) and print either FBI standard or custom fingerprint and palm print cards and/or individual images.

AFIX VP is often employed to provide "view & print only" access to data for non-forensic administrative use (judicial officers, prosecutors, medical examiners offices, etc.)
